

Shobana Rajan, MD

It would be a privilege to be considered for Director at large position at the SNACC. I am currently Staff anesthesiologist and Associate Program Director for the neuroanesthesia fellowship at the Cleveland Clinic.

I have been a SNACC member since my neuroanesthesia fellowship(2009) and have been fascinated by the contributions of our society to the world of neurosciences. With our specialty and society growing at a rapid pace, my core vision is to generate more interest in neuroanesthesia amongst the future generation of anesthesiologists.

As member of the education committee, I am team leader for the monthly “neuroanesthesia quiz” and the “residents and fellows podcasts”. I conducted the “neuroanesthesia review fun quiz” at the SNACC annual conference (2017). I believe that an engaging review of neuroanesthesia could draw the attention of trainees toward this field. I serve as the co-chair of the “trainee engagement committee” of the SNACC.

I have special interest in the development of ERAS protocols in craniotomy and spine surgery and have peer reviewed publications, book chapters and am editing two books. I am on the committee for advancement of technology in education at the Society of education in anesthesia. If given an opportunity, as a member of the board, I would like to collaborate with the SEA and anesthesia programs to disseminate the contributions made to basic and clinical neurosciences made by our eminent members, emphasize the concept of the three pillars of neuroanesthesia and open minds and eyes to neuroanesthesia.
