

I have been a member of SNACC since 1996. I completed a Neuroanesthesia fellowship at the University of Florida in 1998 and am board certified in pediatrics, anesthesia, pediatric anesthesia and pediatric critical care.

I have been awarded basic and translational neuroscience grants from FAER AHA and IARS. My current project, "The effect of anesthetic technique on neurologic outcomes in children with congenital heart disease undergoing surgery requiring cardiopulmonary bypass" is funded by the Gerber Foundation.

I review neuroscience articles for Anesthesiology, Anesthesia and Analgesia, Pediatric Anaesthesia, Brain Research and our own journal, Journal of Neurosurgical Anesthesiology. I have been a member of the editorial board for our journal for several years and have reviewed over 60 manuscripts during my tenure.

I served on the Scientific Advisory Committee for three years under the leadership of Drs. Deborah Culley and Jeffrey Pasternak and am currently on the Clinical Affairs Committee with Dr. Luke James. As a member of the Association of University Anesthesiologists (AUA) Leadership Council and Chair of the AUA Communications Committee, I am supporting the efforts of the Dr. William Young Research Fund.

My involvement in the Society has dramatically shaped my career over the years. I would love to serve those who have mentored me and have shaped my academic career and be a role model for the future generation of neuroscientists and clinician researchers in pediatric neurologic outcomes research.

I hope you will seriously consider my application for a Director-at-Large position.
